

Speaker One-Sheet

COREY WHITE

Cybersecurity CEO | Strategic Partner to Mastercard | Author | Keynote Speaker

"The guy who connects quantum thinking, AI, and cybersecurity to real business risk."

About Corey

Corey White is the CEO and founder of **Cyvatar AI**, a managed cybersecurity company with **zero major customer breaches over six consecutive years**. A **strategic partner to Mastercard** on quantum and AI-era payment security and to **Booz Allen Hamilton** for enterprise incident response, Corey is one of the rare voices who can explain quantum computing, AI, and cybersecurity in ways that are immediately actionable for business leaders.

Over a 30+ year career, he has protected Fortune 500 institutions, governments, and critical infrastructure against the most sophisticated threats. His upcoming book, ***You're Already a Target*** (June 2026), is the plain-English cybersecurity wake-up call for leaders who don't have time to become security experts.

SANS Summit "Talk of the Year" 2024 | 50+ media appearances | CBS News, Finovate, NMSDC

Keynote Topics

1. The Quantum Threat Is Already Here (*Signature Talk*)

Where quantum physics, AI, and cybersecurity collide

Quantum computing will break current encryption. AI is accelerating both attackers and defenders. Corey connects quantum principles to real-world cyber risk and shows why the future is already influencing today's attacks.

Ideal for: Fintech, enterprise, innovation summits, executive offsites

2. You're Already a Target

AI, cyber threats, and why traditional security is failing

AI is accelerating attackers faster than defenders can respond. Detection-first security models are breaking down. Corey reveals what leaders must do differently — now — before it's too late.

Ideal for: General conferences, industry associations, leadership summits

3. One Breach Is Enough

The business reality of cyber risk and leadership accountability

Most companies that get hit once get hit again — not because the hackers are that good, but because leadership rebuilds on the same broken foundation. This talk is for the people who sign the checks.

Ideal for: Boards, C-suite, PE/VC-backed companies, risk management forums

4. How to Survive the Future (*SANS Talk of the Year*)

The AI arms race, the quantum timeline, and a survival framework

The defenders are losing. AI gives attackers superpowers. Quantum computing is about to hand them the master key. But the same technologies can empower defenders — if we move fast enough.

Ideal for: Tech conferences, innovation summits, SXSW, corporate events

5. Quantum Leadership (TEDx-Ready)

What quantum physics teaches us about decision-making and human potential

A quantum computer holds multiple truths at the same time. It connects across impossible distances. It collapses possibility into reality the moment someone observes it. So do you. This talk transforms how leaders think.

Ideal for: TEDx, YPO/Vistage, executive retreats, leadership summits

6. Post-Breach Cybersecurity

What happens after ransomware — and where most companies fail

Rebuilding without prevention guarantees a second breach. Corey walks through the post-breach reality and introduces the prevention-first model that changes the equation.

Ideal for: CISO roundtables, incident response conferences, managed services events

Past Stages & Strategic Partnerships

Mastercard — Strategic Partner, Quantum + AI Keynote	SANS Summit — Talk of the Year 2024
Booz Allen Hamilton — Strategic Partner, IR	NACD Directors Summit — Board Cyber Risk
Aspen Ideas Festival	ITC Vegas (InsureTech Connect)
SXSW	CBS News, Finovate, NMSDC
